Dr. Gilbert V. Levin – Obituary,

Dr. Gilbert Levin – ,It was with great sorrow, Newdeath learnt about the death of Gilbert Levin, 97, who departed from this earth on July 26 at a hospital in Bethesda, Md.

It was reviewed that, Gilbert V. Levin was a great scientist whose research company participated in NASA missions to Mars. he was as well the principal designer of an experiment aimed at detecting the possibility of life on Mars.

According to his son Henry Levin, he died from an aortic dissection. Dr. levin started his career as a sanitation engineer before becoming a space scientist and founding his company, Biospherics (later Spherix Inc.), based in Washington's Maryland suburbs.

In 1971, he had a lot of patents and helped develop an experiment for the Mariner 9 mission, which orbited Mars. He loved making researches on scientific work, but levin has never been fully accepted by the wider scientific community

However, before he died, Dr. Levin told the Johns Hopkins University School of Engineering Magazine last year, "I gave a talk at the National Academy of Sciences saying we detected life, and there was an uproar. Attendees shouted invectives at me. They were ready to throw shrimp at me

from the shrimp bowl. One former adviser said, *'You've disgraced yourself, and you've disgraced science.'"*

Some Colleagues have developed a professional envy of levin's career in science work, which may have been part of the reason for his dismissal in findings by leading NASA scientists. Dr. Levin was an engineer by training, not a physicist or biologist.

Dr. Levin said, *" lamenting his modest success with the sweetener and the wastewater treatment method. "I've got two of the best technologies in the world, and I can't sell them."*

Recently, scientists have now come around saying, *"Dr. Levin's 1976 Mars experiments may have merit, and that he may be proved right in the long run".*
